

Mobile App Development

Native Mobile App dev

(an app for a specific
OS [android / ios])

(if it uses
Camera
bluetooth
Fast)

Cross-platform Mobile
App dev

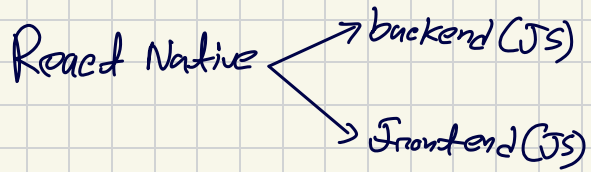

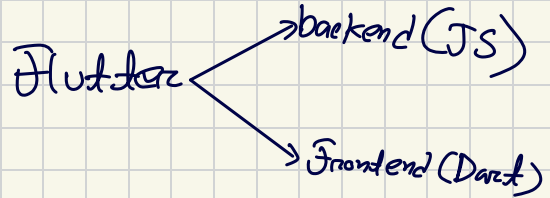

(A single app that
runs on both android
or ios)

(Slow)

Java } android
Kotlin }

Swift } ios

* Flutter
* React native

React Native

A Framework that was developed by Facebook, using

* JS

* React (Frontend For user interface)

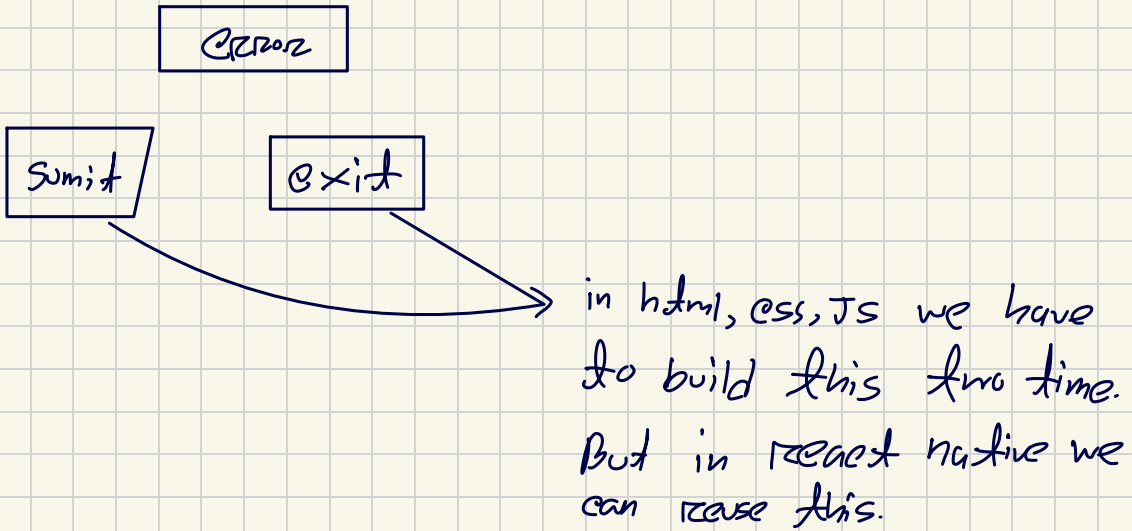

to develop real mobile application that works both on android and ios

React - used For web dev.

React Native - used For mobile app.

Why React-Native is better than HTML + CSS + JS ?

* We can reuse components in React-Native which is not possible in vanilla JS.

Components:

A smaller piece of code to reuse them in code.

— Expo Snack

JSX

Javascript XML

↳ Allows to write JS in html format

```
import React from 'react'
```

```
import {Text, View} from 'react-native'
```

```
export default class App extends React.Component {
```

```
  render()
```

```
  {
```

```
    return(
```

```
      <View>
```

```
        <Text>Grazipur </Text>
```

```
        <Text>@ludy </Text>
```

```
        <Text>24° </Text>
```

```
      </View>
```

```
    )
```

```
  }
```

- Use view to render many components
- Expo Go to show on your mobile
- `{ }` use this to enclose style
- `{ [ ] }` need to use third bracket so if we are using two different styling input.
- If we don't have a child then we can use a self-closing tag.

API = Application platform Interface
(helps to send or receive data
from one application to another)
